

The Clear Choice for Chloramination

When it comes to chloramination and disinfection, you have options - the clear choice is **clarix™** premium liquid ammonium sulfate. Choosing **clarix™** helps ensure that you are employing the safest choice for your operators, as well as producing the highest quality drinking water for your customers.

WHY clarix?

- Made from a high-purity, liquid source - *never crystalized*
- Visibly purer, and measurably clearer in color
- Side by side labs show lower contaminants, heavy metals, and insoluble matter, ensuring that the products used for drinking water meet the highest standard required
- Available in Virginia and surrounding states

clarix vs. Other Chloramination Alternatives

- A non-hazardous option for chloramination
- Requires less PPE, safety training, and safety equipment than aqueous ammonia and anhydrous ammonia
- Lower overall health risk compared to aqueous ammonia (according to the National Fire Protection Association)
- Low conversion cost from aqueous ammonia

WHY PENCCO?

- Extensive Manufacturing and Distribution Network
- High Quality, High Purity Products
- Seamless, On-Time Deliveries
- Individualized Service
- Customer Safety Training

At Pencco, we are committed to performing at the highest level so our customers can do the same. From our manufacturing facilities and extensive distribution network to our world-class engineers and sales professionals, we are dedicated to providing personalized service and reliable products, based upon our core values of integrity and continuous improvement.
